

- Project:** Airport Metro Connector 96th Street Station
- Agency:** Los Angeles County Metropolitan Transportation Authority
- Client:** Gruen Associates
- Soteria's Role:** Threat and Vulnerability Analysis and Resolution and System Safety and Security Planning and Certification
- Completion:** 2025

Project Overview

This project is for a major transit hub that will connect the Metro Crenshaw/LAX and Green rail lines, area bus routes, and the LAX Automated People Mover.

The Aviation/96th Street Station is a light-rail station on the Crenshaw/LAX line. This station is a gateway to LAX and provides the connection for passengers, employees, and visitors between LAX and the regional bus and rail transit system, minimizing the impact to airport facilities and surrounding communities. Project features include:

- Large-capacity light rail station
- Bus Plaza and terminal facility for Metro and municipal buses
- Secured bicycle parking
- Metro Customer Center
- Pedestrian Plaza with passenger pick-up and drop-off area
- Direct connection to the LAX Automatic People Mover, a project to which Soteria is also contributing

Soteria's Contribution to This Project

Soteria Company developed the Threat and Vulnerability Analysis report and prepared graphics to support and communicate the security and crime data research findings. We oversaw the certification and audit process of the design conformance checklists, developed the construction conformance checklists, and facilitated the Project's certification process.
